

# NUDURA Project Profile

Eagle Rising - Colorado, USA

## FAST FACTS

- This project was ideal for NUDURA, due to the fact that the owner wanted an energy efficient house, as well as a quiet house in a very windy location. The combination of R-value, mass, and zero air infiltration maximize the energy efficiency, and the concrete structure stands up to the high winds structurally, as well as significantly reducing the noise.
- Engineer on the project: John Giltner, P.E.
- 4,400 sq ft. with a combination stone stucco finish.

*“This project optimizes the use of NUDURA, while also pushing the limits of the product. Also, the owners absolutely love the house!” James R. Plagmann - AIA - Human Nature Architecture*

*For a full article on Eagle rising as seen in Eco-Structure Magazine visit [Nudura.com](http://Nudura.com).*

## PROJECT STATISTICS

**Location:**

Colorado, USA

**Type:**

Residential

**Size:**

4,400 sq. ft.

## CONSTRUCTION TEAM

**General Contractor:**

Mike Pettigrew

**Architect:**

James R. Plagmann AIA.

Human Nature Architecture

**ICF System:**

NUDURA Inc.
